Geographical metadata in the California Language Archive

Amy Campbell, Andrew Garrett*, Hannah Haynie, Justin Spence, Ronald Sprouse, and John Sylak (University of California, Berkeley)

General background

The California Language Archive integrates the catalogs and the digital content of two archival repositories at Berkeley:

- Berkeley Language Center (blc.berkeley.edu)
- Survey of California and Other Indian Languages (linguistics.berkeley.edu/~survey)

The CLA is in development and will be online in February 2011. In the future, other language archives may also contribute to the CLA (such as the Bancroft Library and the Hearst Museum at Berkeley).

Berkeley Language Center

An archive of audio recordings deposited since about 1950 from languages throughout the Americas with a special focus on California.

- About 1,730 hours of audio recordings (cataloged to date)
- Original media: reel-to-reel tapes, cassette tapes, DATs, CDs, videos
- 7,842 audio segments in 221 collections, e.g. ‘Catherine A. Callaghan collection of Northern Sierra Miwok field recordings’

Digitization status: all cataloged material is digitized

Information about geography

- Metadata deposit forms showing consultant linguistic histories
- Geographical metadata in the California Language Archive

Survey of California and Other Indian Languages

An archive of paper materials deposited since about 1950 from languages throughout the Americas with a special focus on California.

- About 260 linear feet of material
- Contents include field notebooks, unpublished manuscripts, letters and notes, lexical files, etc.
- 2,451 distinct catalog items in 186 collections

Digitization status: currently >50,000 scanned images from 200 items in 29 collections

Information about geography

- Available when researchers report information about consultants, or locations of fieldwork sessions
- Occasionally consultant biographical information is accessible through other sources (publications or local communities)

Sources of metadata

Contributing repositories primarily hold legacy material, from which we glean geographical information. (New depositories will be asked to supply geographical metadata.)

Geographical metadata

Metadata about people

The CLA database includes biographical information about researchers and linguistic consultants:

- Born at [PLACE. DATE]
- Lived at [PLACE. DATE]
- Ethnic affiliation with [PLACE]
- From [PLACE]
- Mother from [PLACE]

One PLACE per individual can be tagged for dialectological priority.

Metadata about items (field notebooks, etc.)

Legacy material often gives no biographical or geographical information about consultants; sometimes they are not even named. We record:

- Fieldwork PLACE
- Survey

User interface

Map-based searching

Exploring a map interface shows items with geographical metadata in the CLA database:

The map pins distinguish audio vs. paper material with vs. without digital content.

Maps in search results

A search for Southeastern Pomo material with digital content yields the following partial result:

The map shows places for items with geographical metadata in the CLA database.
