

Service Innovation Using Design Patterns

Frontiers in Service Conference

5 October 2007

Robert J. Glushko

University of California, Berkeley

glushko@ischool.berkeley.edu

Outline for the Talk

Motivation for Using Design Patterns

A Top-Down Survey of Design Patterns

Defining Services for Designers

Motivation

Because services are often less tangible or more abstract than products, service descriptions are more amenable to conceptual manipulation

As "service" moves beyond traditional person-to-person services to self-service, web services, computer-to-computer service we are induced to take a more abstract perspective to emphasize what they have in common

This suggests that design patterns or models for services could be exploited systematically to invent new or improved services

This is a framework for innovation, not for evaluation

What Are Patterns?

A Pattern

is a model that is sufficiently general, adaptable, and worthy of imitation that it can be reused

It must be *general*

so that it can apply to a meaningfully large set of possible instances or contexts

It must be *adaptable*

because the instances or contexts to which it might apply will differ in details

It must be *worthy*

because the instances or contexts to which it might apply are supposed to benefit by following the pattern rather than being impaired

Why We Use Patterns

Assist in analysis

Expose inefficiencies

Encourage best practices

Simplify / consolidate / remove redundancies

Enable transparent substitution

Facilitate generalization and specialization

A Top-Down Survey of Patterns

Patterns that describe connected / combined services

- *Business model or organizational* patterns
- *Process* patterns

Patterns that describe individual services

- *Information* patterns
- *Service dimensions or facets*

Betancourt and Gautschi - Patterns of Economic Activity

Production, Distribution, and Consumption are the three economic activities

What are their spatial relationships? What are their temporal relationships? 25 possibilities

Time	{P, D, C}	D {P, C}	C {P, D}	P {C, D}	P D C
Space					
{P, D, C}	1	2	3	4	5
D {P, C}	6	7	8	9	10
C {P, D}	11	12	13	14	15
P {C, D}	16	17	18	19	20
P D C	21	22	23	24	25

MIT Business Model Patterns

<i>Basic Business Model Archetype</i>	<i>What type of asset is involved?</i>			
	<i>Financial</i>	<i>Physical</i>	<i>Intangible</i>	<i>Human</i>
Creator	Entrepreneur	Manufacturer	Inventor	Human Creator*
Distributor	Financial Trader	Wholesaler/ Retailer	IP Trader	Human Distributor*
Landlord	Financial Landlord	Physical Landlord	Intellectual Landlord	Contractor
Broker	Financial Broker	Physical Broker	IP Broker	HR Broker

* These models are illegal in the US and most places today because they involve selling human beings. They are included here for logical completeness.

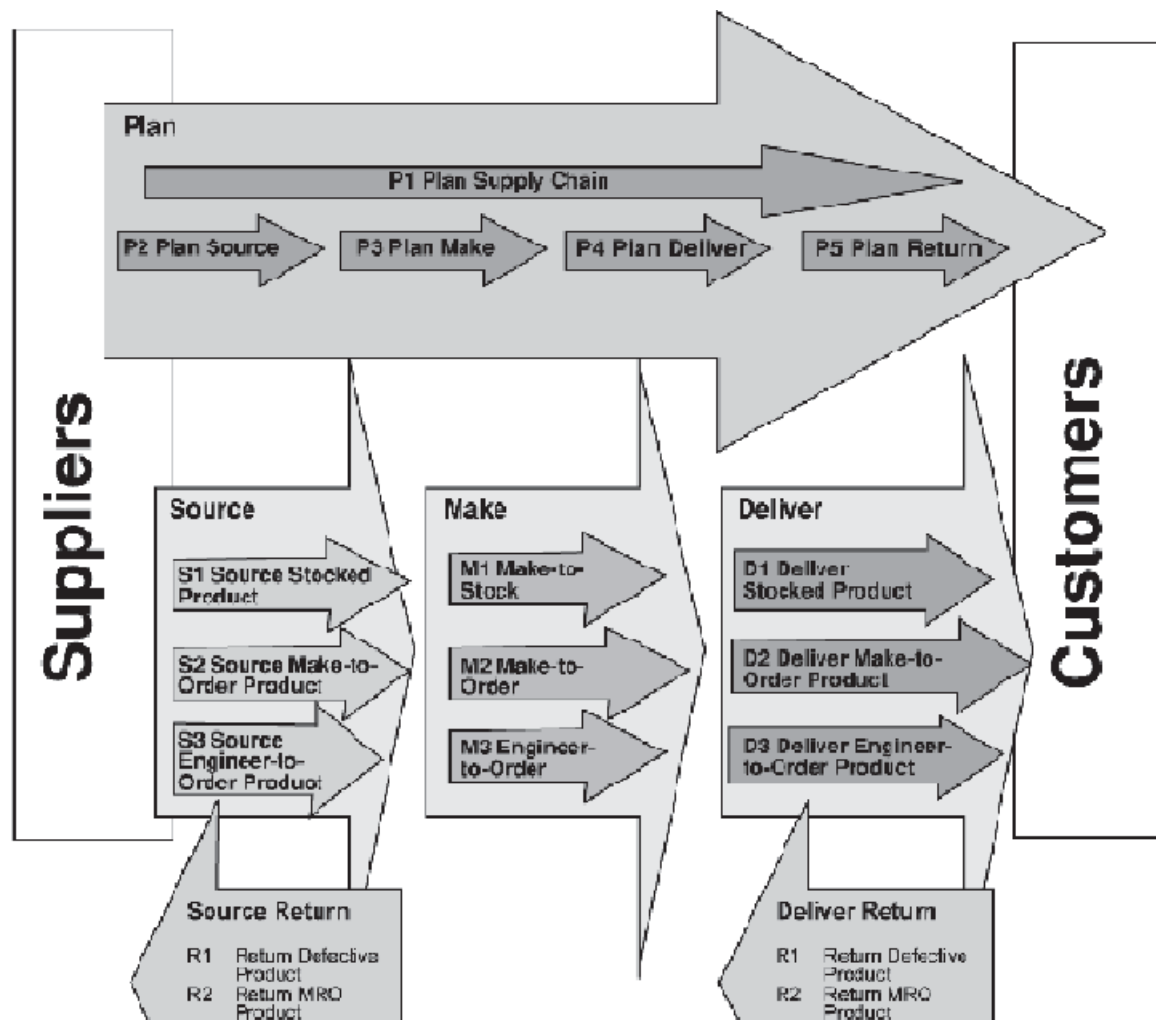

MIT Model Generalization Hierarchy

- ▣ Produce
 - ▣ Produce as what kind of organization?
 - Produce as a voluntary association
 - Produce as a government
 - Produce as a part of a business
 - ▣ Produce as a business
 - ▣ Produce as a business - examples
 - ▣ Produce as a business - views
 - ▣ Produce with what business model?
 - ▣ Produce as a Creator
 - ▣ Produce as a Distributor
 - ▣ Distribute what asset?
 - ▣ Distribute financial asset {Financial trader}
 - ▣ Distribute physical asset {Wholesaler/retailer}
 - ▣ Distribute how?
 - ▣ Distribute via internet {Wholesaler/retailer}
 - ▣ Distribute via electronic auction {Wholesaler/retailer}
 - Distribute via electronic lottery {Wholesaler/retailer}
 - ▣ Distribute via electronic store {Wholesaler/retailer}
 - Distribute catalog goods via electronic store {Land's End}
 - Distribute health & beauty items via e-store {Drugstore.com}
 - Distribute books via e-store and physical {Barnes and Noble}
 - Distribute fashion clothing via electronic store {boo.com}
 - Distribute spoken audio via electronic store {Audible}
 - Distribute prerecorded music via electronic store {MP3.com}
 - Distribute software via electronic store {Beyond.com}
 - Distribute postage via electronic store {Stamps.com}
 - Distribute books via electronic store {Amazon.com}**
 - Distribute grocery items via electronic store {Peapod}
 - Distribute office products - elec./phys.store {Staples}
 - Distribute MRO supplies via electronic store {Grainger}

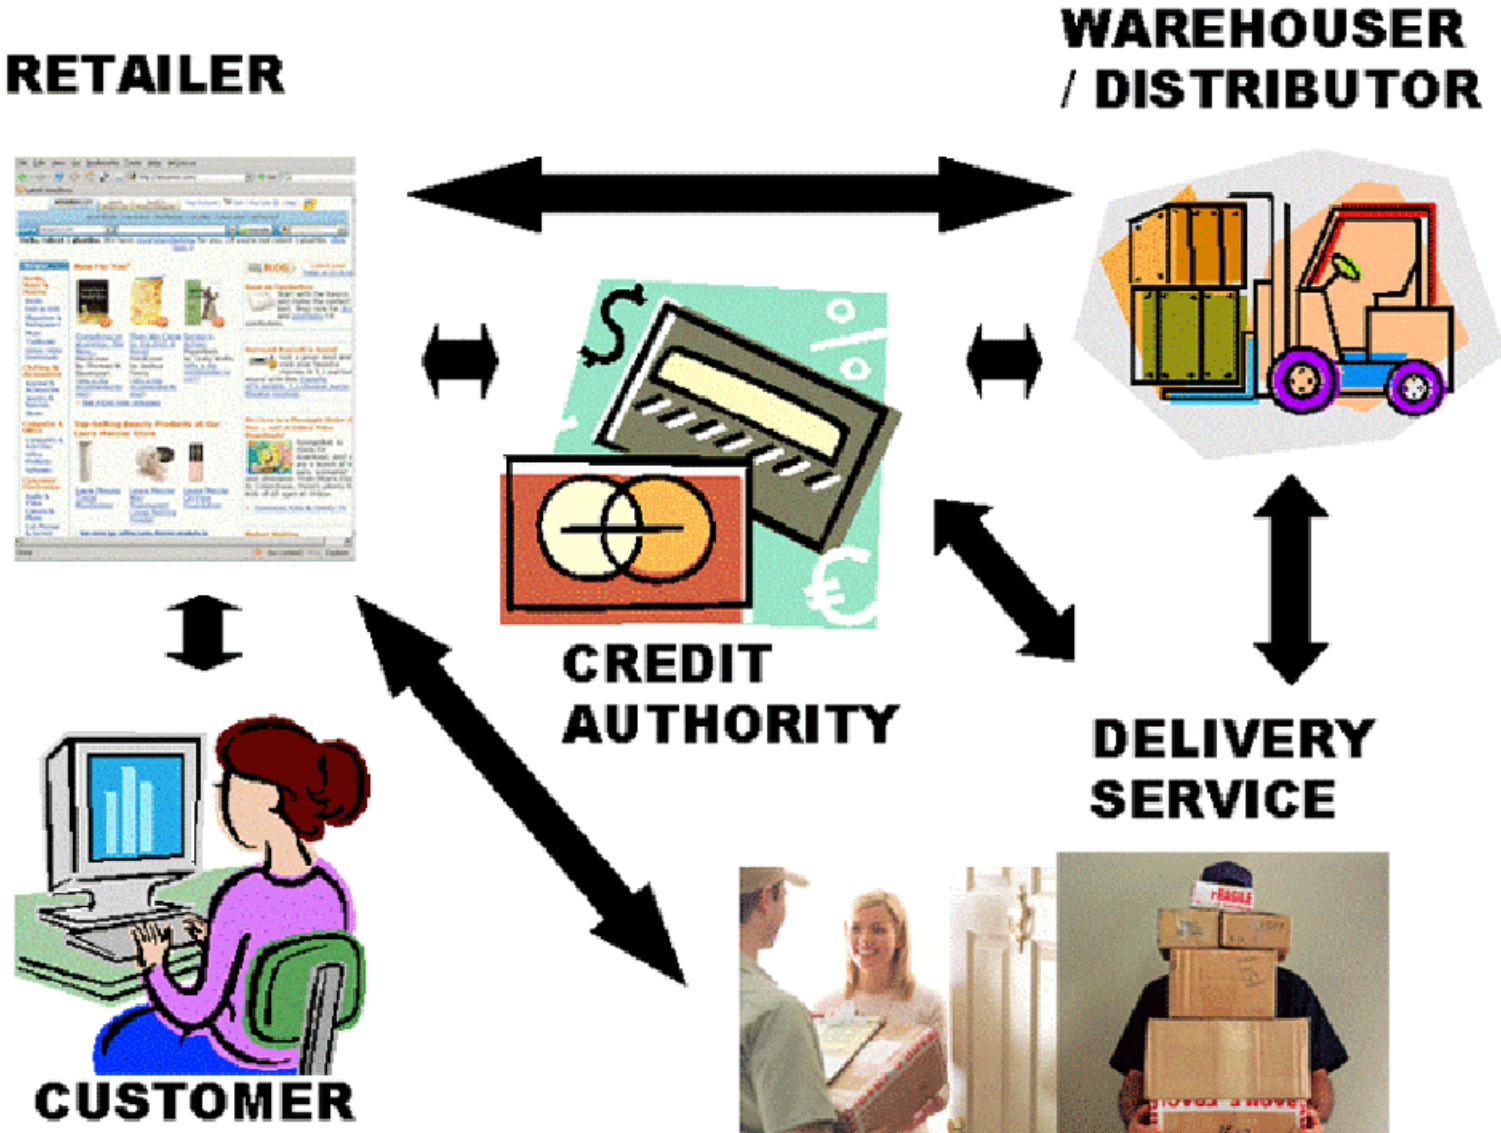

Patterns for "Componentized" Businesses

| | Business Administration | New Business Development | Relationship Management | Servicing and Sales | Product Fulfillment | Financial Control and Accounting |
|-------------|---------------------------|--------------------------|-------------------------|---------------------|----------------------|----------------------------------|
| Directing | Business Planning | Sector Planning | Account Planning | Sales Planning | Fulfillment Planning | Portfolio Planning |
| Controlling | Business Unit Tracking | Sector Management | Relationship Management | Sales Management | Fulfillment Planning | Compliance |
| | Staff Appraisals | Product Management | Credit Assessment | | | Reconciliation |
| Executing | Staff Administration | Product Directory | Credit Administration | Sales | Product Fulfillment | Customer Accounts |
| | | Marketing Campaigns | | Customer Dialog | | |
| | Production Administration | | | Contact Routing | Document Management | General Ledger |

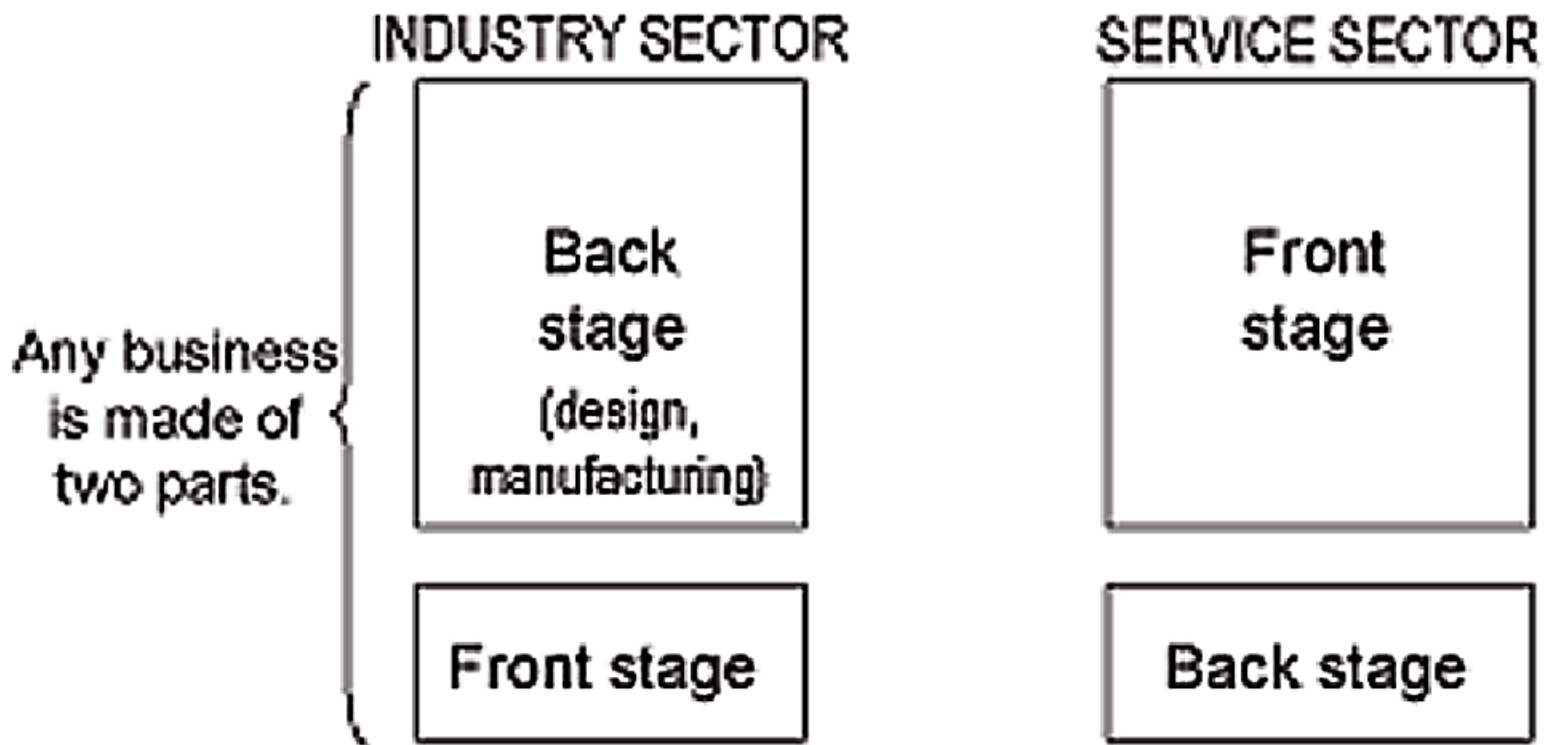

Supply Chain Operations Reference Model (SCOR)

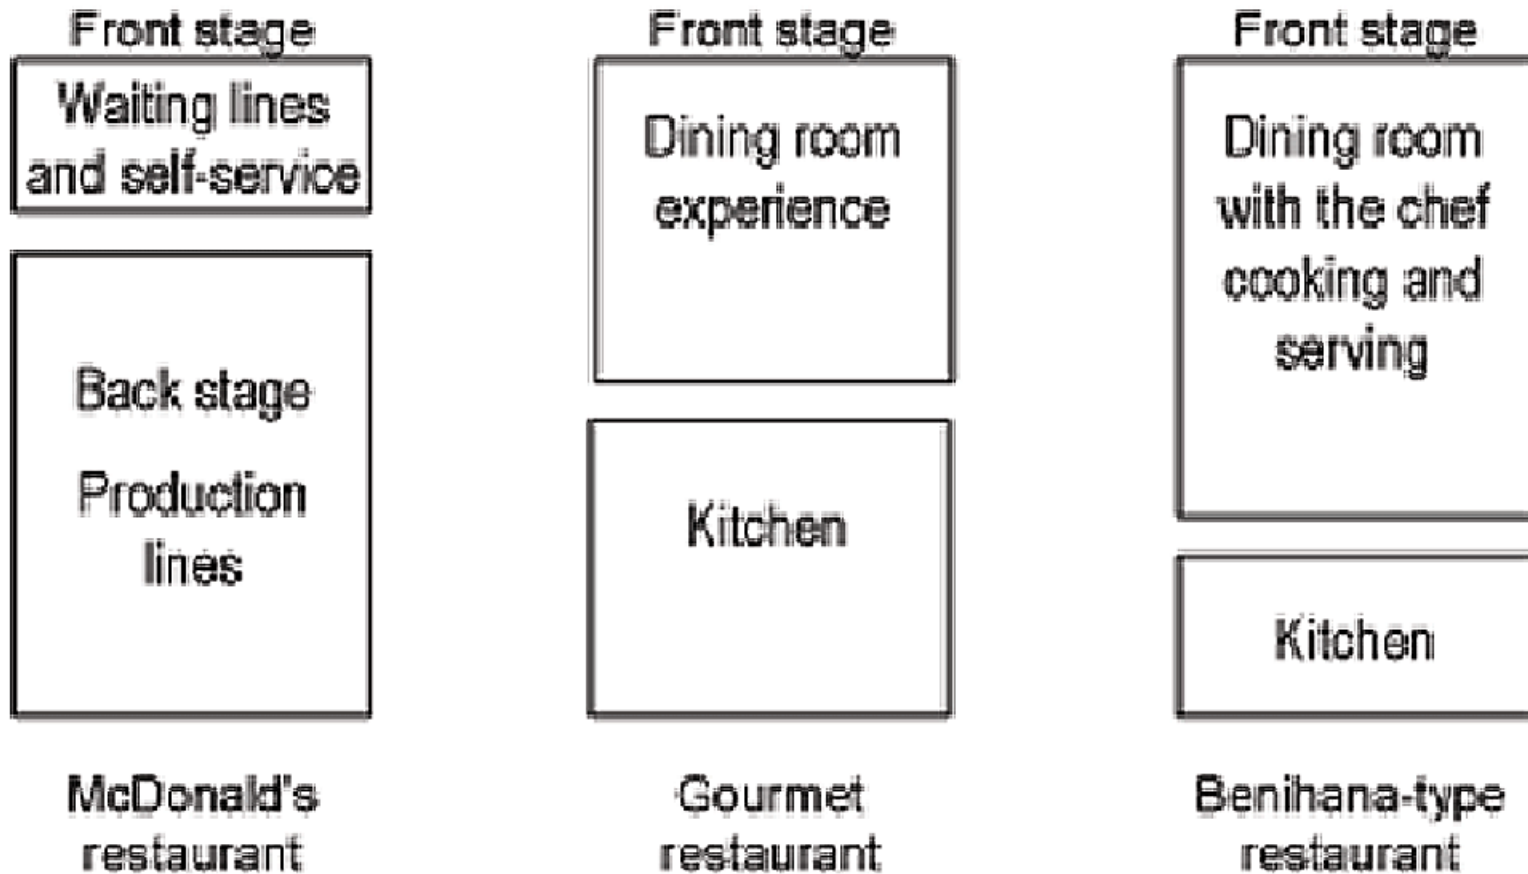

Drop Shipment Pattern

The "Front Stage" and "Back Stage" Pattern

Innovation Through Manipulation of the Front / Back Stage Boundary

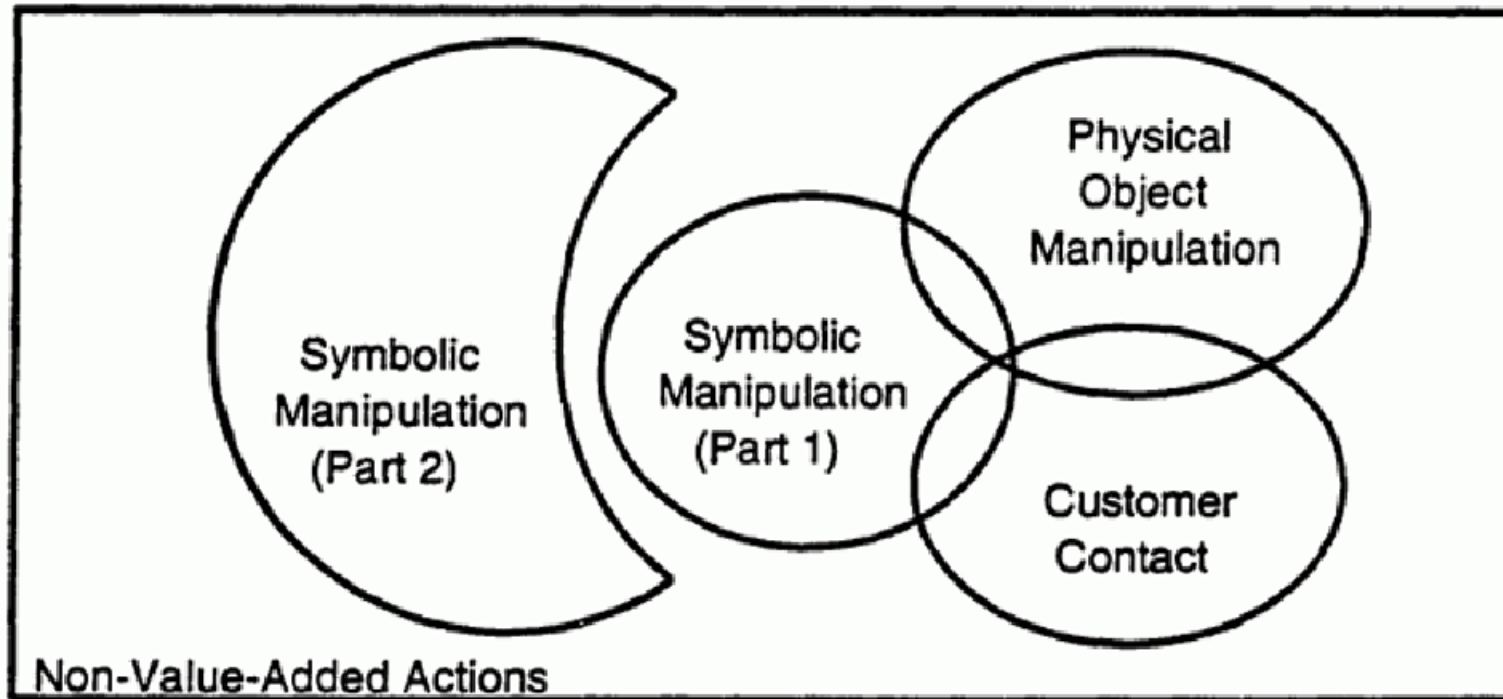

Apte & Mason -- Patterns for Service "Disaggregation"

Business models / occupations can be characterized by their intensity on three dimensions

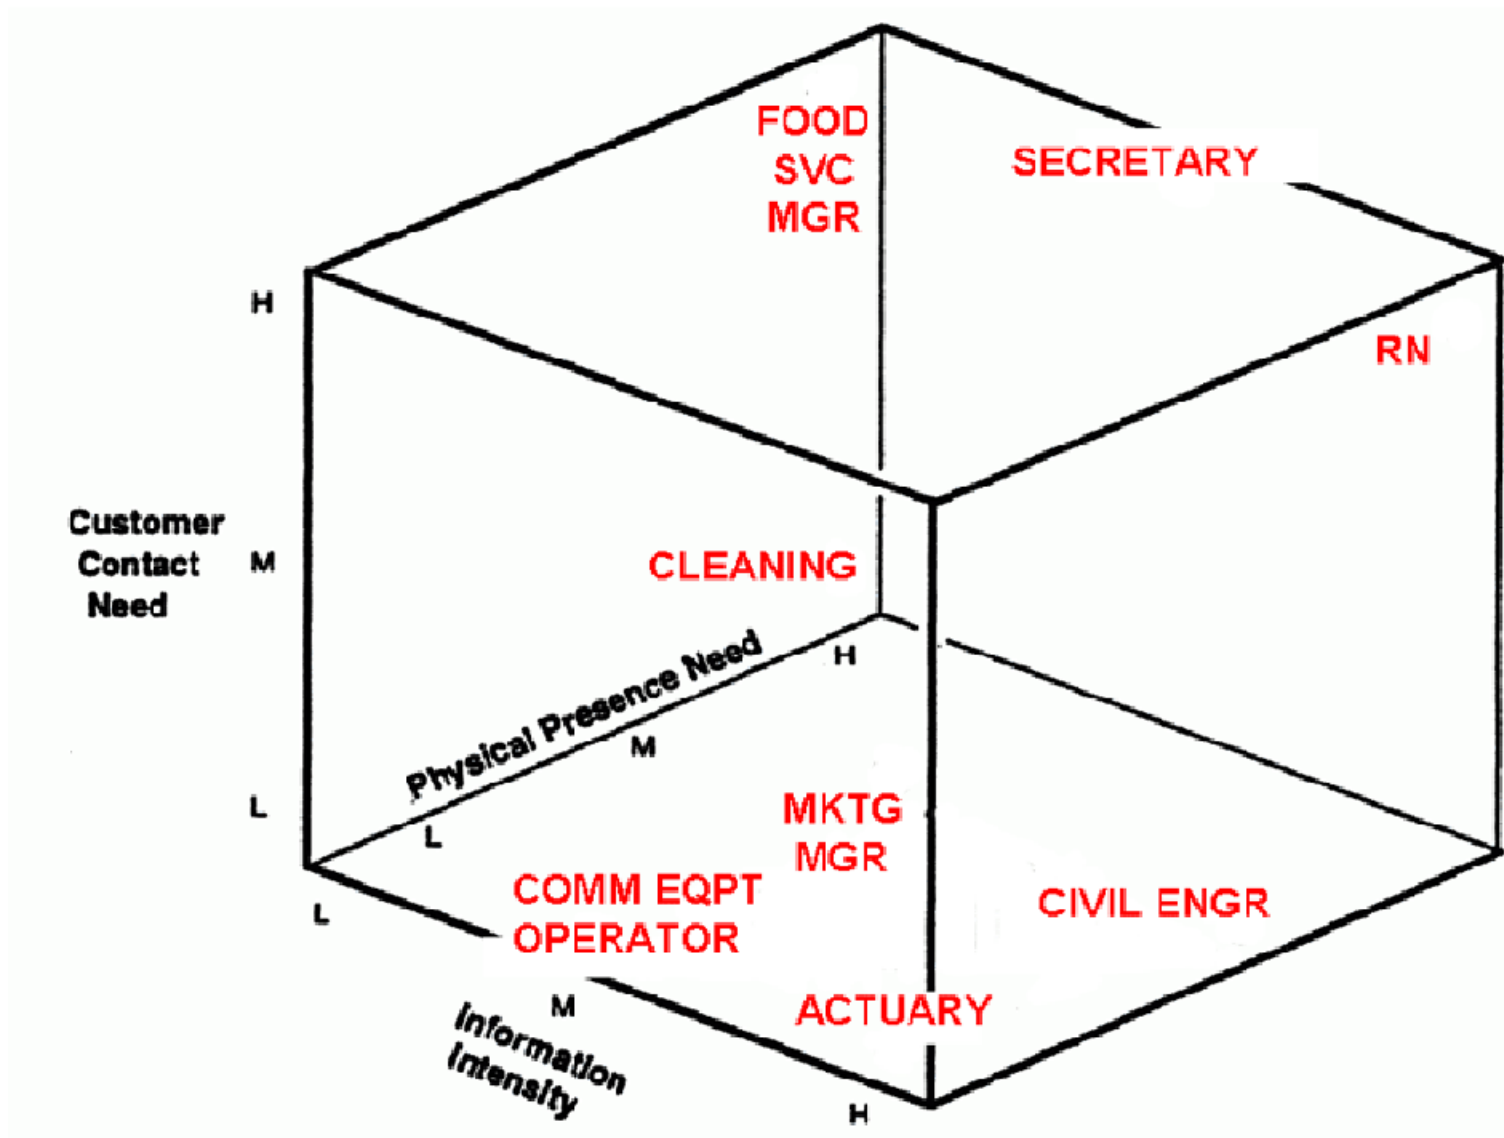

| Occupation | Information Intensity | Customer Contact Need | Physical Presence Need |
|-----------------------------|------------------------------|------------------------------|-------------------------------|
| Actuary | H | L | L |
| Marketing Manager | H | M | L |
| Civil Engineer | H | L | M |
| Comm. Eqpt. Operator | M | L | L |
| Cleaning | L | L | H |
| Food Service Manager | L | H | H |
| Secretary | M | H | H |
| Registered Nurse | H | H | H |

Apte & Mason -- After Disaggregation

B. Reengineered Activity

Apte & Mason: To Disaggregate, or Not To...

A New Design Framework for Services -- Glushko & Sims

Service innovation is hampered by pattern frameworks that describe business models or services in “one and only one” place they fall in a classification scheme

Rather than focus on categories for service classification, it is more useful to emphasize dimensions or facets of service design that define abstract characteristics of services

A service design chooses the extent to which each dimension or factor is relevant, and how the extent or intensity of the factor is allocated between the service provider and service consumer

Some dimensions are only relevant when providers and consumers are people, while others concern the extent of technology and capital and can apply to services that don't involve any people

Dimensions of Service Design - Human Factors

Knowledge/Expertise: How much knowledge or expertise must the service provider and service consumer possess? to accomplish the service offering?

Cognitive Capacity: How much intelligence, as opposed to knowledge, must the service provider and service consumer possess?

Physical Capacity: How much physical effort are required of the service provider and service consumer?

Emotional Intensity: To what degree will the service offering require intense emotional experience by the service provider or service consumer?

Time Intensity:

How much of the provider's and consumer's time is required?

Dimensions of Service Design - Technology & Capital Factors

Technology & Capital Investments:

Which technologies and other fixed-capital resources must the service provider and service consumer control?

Disposable Resources:

Which resources are consumed in carrying out the service and which party must supply them?

Encoded Information:

What encoded information is required and which party must supply it?

Some Implications and Hopes About this Design Framework

Instead of trying to fit services into categories, these design dimensions can serve as facets that enable more nuanced comparisons between services

It should be easier to recognize similar design challenges and identify reusable design patterns

This approach naturally enables us to invent new services through analogy, generalization, induction and other classical mechanisms

We might be able to use the dimensions to assess the capabilities of service providers

But we're not there yet... stay tuned!
